**Methodology:** Findings are from an October 12 – 13, 2008 survey using a comprehensive predictive model of “likely” voters, based on election cycles and other factors of voters in Florida. The survey was conducted using an automated telephone dialer and the voice of a professional announcer.

The targeted-registration-based-sampling (TRBS)\* selection criteria were based on election cycles and other voter factors in Florida. Datamar proprietary algorithms were used to generate random samples from the target group for calling.

Where necessary, responses were weighted according to age, gender, and political party.
