Methodology: Findings are based on May 14 – 18, 2007 survey using a comprehensive predictive model of “likely” voters, based on election cycles and other factors of voters in Florida. The survey was conducted using an automated telephone dialer and the voice of a professional announcer. A Datamar proprietary algorithm was used to generate random samples of voters for calling. The margin of error for the total sample is +/- 4.8 percent at the 95 percent confidence level.

Where necessary, responses were weighted according to age, gender, and political party.
